

COMMUNICATION AND VENDING REFUND CENTER

ABSTRACT OF THE DISCLOSURE

A communication and refund center comprises a lockable cabinet structure having an access panel disposed on the cabinet structure cooperating to form a sealed enclosure when the access panel is engaged with the cabinet, a power supply to the interior of the cabinet, a coin chute accessible from the exterior of the cabinet structure, a coin magazine comprising a coin sleeve and a remotely actuated coin solenoid disposed above the coin chute, a telephone dialer, a digital voice modulator connected with and operative in response to the telephone dialer, a relay circuit operatively associated with the voice modulator and the coin solenoid, the relay circuit operating the coin solenoid in response to commands from the voice modulator to provide a specified number of coins to the coin chute. A modular mounting plate carries the power supply, telephone dialer, and voice modulator.
